DATE: August 1, 2005

NUMBER: 05-002

- The new record-usa recessed exit device complies with current egress requirements for size and actuation, extending more than one-half the width of the door and requiring only ¼” of travel.
- Complies with the BOCA requirement for the exit device to have a “projection” from the face of the door.
- Available on full break out (SO-SX) and fixed panel (O-SX) door systems.
- Integrated into the door with a 3 ½” tall profile; a matching horizontal is available for sidelites.
- Standard actuation bar color is clear anodized; special finish is available.
- Available now as an alternative to the Jackson Paddle and Adams-Rite 8600 exit devices. It will become the standard for an exit device option, effective August 1, 2005.
- Adding this option to a sliding door package does not increase the lead time.
- Order Entry forms are being revised to include this option, or “Recessed Exit Device” can be specified on existing forms.
