PROJECT DETAILS

Supply, install and commission
Vision Touch Speedgates for secure
access to the student kitchen area

Launched in 2013, Scape has become the largest purpose-built student accommodation (PBSA) owner and operator with 33 buildings across the country.

For the Scape Victoria Street development, Vingcard introduced project builder Infinity Constructions to Record & ASSA ABLOY to provide a secure and user-friendly entrance to the student kitchen area.

The 'Vision Touch' speedgate was selected based on its modern slim compact design, the ability to integrate with various access control systems to manage and monitor people going in and out, and its durable and low maintenance construction.

Two Vision Touch lanes were surface mounted to the polished concrete flooring with frameless glass sidelights, designed to match the door panels to enclose the lanes to the adjacent wall framing.

To ensure only authorised residents can access the kitchen area, each lane was fitted with Vingcard Signature RFID readers to the top glass panel. This technology also matched access technology used for individual apartment doors throughout the building.
